-!- SUBCULLULAR LOCATION: SCOTETED LINKED (BY SIMILARITY).
-!- SUBCULLULAR LOCATION: SCOTETED (Probable).
-!- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN THE DEVELOPING LIMB BUD, INITIALLY DETECTED IN THE DISTAL MESENCHYME, AND LATER LOCALIZING TO REGIONS AROUND THE DEVELOPING BONES. IS ALSO EXPRESSED IN ADULT DENTAL PULP AND BRAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence comprises the 109 amino acid residue CC C-terminal region of human growth differentiation factor 8 (GDF-8), i.e. residues 267-375 of the full-length protein (see AAB20131). The homodimer of this region is thought to be the biologically active form of GDF-8. It is an object of the muscle civentian to produce a recombinant therapputic vaccine capable of convention to produce a recombinant therapputic vaccine capable of ceffecting down-regulation of GDF-8 in order to increase the muscle composite the control of the muscle composite the control of GDF-8 (see AAB20145-53) are provided that are capable of breaking autotolerance against course in which a portion of the native sequence is replaced by a course of the protein of the native sequence is replaced by a course of the high number (9) of Cys residues in the C-terminal course in the control of the native sequence in the creating can be used for genetic immunisation of the native 3-dimensional course tructure of the protein. Nucleic acids encoding the GDF-8 variants can be used for genetic immunisation of the antimals. Down-regulation confidence is activity can increase muscle mass by up to at least 45% in control of the course of the course of the activity can increase muscle mass by used to a treat human diseases such as canti-GDF8 vaccines can be used to control of the activity and for nations a canter and absorbed atrophy is

New mutein of transforming growth factor-beta superfamily protein, useful for treating or preventing e.g. ectopic bone formation, competes
                                                                                                        for receptor binding
```

Disclosure; Fig 6; 54pp; German.

The present invention relates to muteins of a chain of a protein which, when in the form of a homodiner, has antagonistic or partial agonistic activity, and where the mutation results in the protein binding with low affinity to its receptor. The protein is a member of the transforming growth factor beta (TGFbeta) superfamily. The mutant sequences of the invention can be used in the treatment of diseases associated with the overexpression of TGFbeta family proteins, including ectopic bone formation, psoriasts, muscular atrophy, sear formation, fibrosis and cirrhosis. The present sequence is the human GDF8 protein.

New growth differentiation factor 8 - useful for treatment and diagnosis of cell proliferative disorders esp. of muscle.

Disclosure; Page 41; 84pp; English

GDF-8 can be used to maintain cells before transplantation; to improve efficiency of cell fusion and to treat obesity or diserelated to abnormal adipocyte proliferation.

This is the amino acid sequence of the C-terminal portion of mouse growth differentiation factor-8 (GDF-8), a novel member of the transforming growth factor-beta superfamily that appears to relate to various cell proliferative disorders, especially those involving muscle, nerve and adipose tissue. The sequence was deduced from a partial genomic clone (see AAV45809). A full-length sequence (see AAW30689) has been deduced from a cDNA clone (see AAV42113). The invention provides novel mammalian and avian GDF-8 proteins (see AAW5983-92). A transgenic non-human animal is claimed in which CDF-8 expression is disrupted or interfered with. Also claimed are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb from these animals; (2) method for increasing muscle mass in animals by administering an antibody (Ab) that binds to GDF-8; (3)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Growth differentiation factor-8; GDF-8; mouse; transgenic animal; transforming growth factor-beta; muscle; meat; inhibitor; obesity; neuromuscular disease; muscular dystrophy; cachexia; AIDS; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inhibiting the action of GDF-8 by treating foetal or adult muscle or progenitor cells with a GDF-8 inhibitor; (4) isolated nucleic acid encoding a GDF-8 protein truncated by loss of the C-terminal cardive fragment. The transgenic animals have increased muscle mass and for poultry reduced cholesterol contents. Method (3) is used to treat muscle wasting or neuromuscular diseases, muscular atrophy cand aging, particularly muscular dystrophy, spinal cord or transmatic injuries, congestive or obstructive lung disease, AIDS and cachexia. Method (4) is used to treat cancer of muscle, connective tissue and bone, or obesity. Also (not claimed) GDF-8 connective tissue and bone, be used to treat cancer of muscle, cambe used to maintain myoblasts intended for transplanting or to improve efficiency of fusion. Ab can be used to detect and cancer of particularly in muscle, for diagnosis or monitoring), also for immunotherapy and in vivo imaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 109;

The predicted GDF-8 sequence contains two potential proteolytic processing sites.

Cleavage of the precursor at the second of these sites would generate a mature C terminal fragment 109 amino acids in length with a predicted molecular weight of 12,400.

GDF-8 has been shown to result in increased bone and muscle mass (such as ribs) when expressed in reduced amounts. GDF-8 minus transgenic animals and forms of animal feed that can inhibit/reduce production of GDF-8 are of commercial interest.
New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome and cacheria
                                                                                                                                                                                                                                                                                                                                                                                                         Gene therapy; growth differentiation factor-8; GDF-8; AIDS; cachexia; neurodegenerative disease; amyotrophic lateral sclerosis; obesity; muscular dystrophy; musculodegenerative disease; tissue repair; muscle wasting disease; neuromuscular disorder; spinal cord injury; traumatic injury; congestive obstructive pulmonary disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of muscle, bone or adipose tissue. A GDF-8 expression may also have a role in the therapy of abnormal growth of muscle, bone or adipose tissue. A GDF-8 monoclonal antibody, GDF-8 antisense molecule or dominant negative polypeptide could be used with foetal or adult muscle cells, bone cells or progenitor cells. These agents can be administered to a patient suffering from a disorder such as muscle wasting disease, neuro muscular disorder, muscle atrophy, costeoporosis, bone degenerative diseases, obesity or other adipocyte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. ODF-8 is also useful for treating malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cord injury, traumatic injury, congestive obstructive pulmonary disease
                                                                               New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromouscular disorder, acquired immunodeficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to growth differentiation factor-8 (GDF-8) coding sequences and proteins. The present sequence is a GDF-8 protein, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular diseases (e.g. amyotrophic).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               coding sequences and proteins. The present sequence is a GDF-8 protein, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease necommendar disorder, spinal cord injury, traumatic injury, congestive obstructive pulmonary disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is that of AutoVac construct GDF-8 ext, which consists of the C-terminal 160 amino acids of human growth differentiation factor 8 (GDF-8, see AAF20131) with residues 16-36 cc differentiation factor 8 (GDF-8, see AAF20131) with residues 16-36 cc substituted by the promiscuous tetanus toxin T-cell epitope P30 (see AAF20144) and residues 37-51 substituted by tetanus toxin T-cell epitope P2 (see AAF20143). It is an object of the invention to produce a recombinant therapeutic vaccine that is capable of effecting comparison of GDF-8 in order to increase the muscle growth rate of farm animals. The vaccines (see AAF20145-53) are capable of breaking autotolerance against autologous GDF-8. They comprise the C-terminal portion of human GDF-8 in which a portion of the native sequence is replaced by a T-cell epitope such as P30, with minimal disturbance of the authentic 3-dimensional structure of the protein. Mucleic acids encoding the GDF-8 variants can be used to repetic immunisation of the animals. Down-regulation of GDF-8 cctivity can increase muscle mass by up to at least 45% in Cattle, pigs and poultry used for meat production, reducing the need for pigs and poultry used for meat production, reducing the need for antihiotic feed-additives. Anti-GDF8 vaccines can be used to treat human diseases such as cancer cachexia where muscle atrophy is pronounced and for patients suffering from acute and chronic heart continues the suffe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The present sequence is a GDF-8 protein, which was isolated in the present invention. GDF-8 is useful for treating neurodegenerative diseases (e.g. amyotrophic lateral sclerosis and muscular dystrophy), musculodegenerative diseases or in tissue repair due to trauma, obesity and disorders related to abnormal proliferation of adipocytes. GDF-8 is also useful for treating malignancies of the various organ systems, particularly cells in muscle or adipose tissues and in gene therapy for the treatment of cell proliferative or immunological diseases mediated by GDF-8. In addition, GDF-8 is also useful for treating muscle wasting disease, neuromuscular disorder, spinal cord injury, traumatic injury, congestive obstructive pulmonary disease (COPD), AIDS or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New substantially purified growth differentiation factor-8 polypeptide, useful for treating muscle wasting disease, obesity, muscular dystrophy, neuromuscular disorder, acquired immunodeficiency syndrome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAB20132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of AutoVac construct GDF-8 dimer comprising 2 copies of the 109-amino acid (C-terminal region of human CC growth differentiation factor 8 (GDF-8, see AAF20141) covalently connected through the p2 and p30 T-cell epitopes (see AAB20143-44) CC connected through the p2 and p30 T-cell epitopes (see AAB20143-44) CC of tetanus toxin. It is an object of the invention to produce a recombinant therapeutic vaccine that is capable of effecting CC compression of GDF-8 in order to increase the muscle growth crate of farm animals. The vaccines (see AAB20145-53) are capable of breaking autotolerance against autologous GDF-8. They comprise the C-terminal portion of human GDF-8 in which a portion of the native sequence is replaced by a T-cell epitope such as P30, with minimal disturbance of the authentic 3-dimensional structure of the protein. Nucleic acids encoding the GDF-8 variants can be used for genetic immunisation of the animals. Down-regulation of GDF-8 criivity can increase muscle mass by up to at least 45% in cattle, pigs and poultry used for meat production, reducing the need for antibiotic feed-additives. Anti-GDF9 vaccines can be used to treat human diseases such as cancer cachaxia where muscle atrophy is pronounced and for patients suffering from acute and chronic heart
                                                                                                                                                                                                                                                                                                                                                                                                             Matches 109;

                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of turkey growth differentiation factor 8 (GDF-8), also called myostatin. It is an object of the invention to produce a recombinant therapeutic vaccine capable of effecting down-regulation of GDF-8 in order to increase the muscle growth rate of farm animals. Variants of GDF-8 (see AAB20145-53) are provided that are capable of breaking autotolerance against autologous GDF-8. These comprise a C-terminal portion of human CGDF-8 in which a portion of the native sequence is replaced by a Cr-cell epitope such as the promiscuous tetanus toxin T-cell epitope Tr-cell epitope such as the promiscuous tetanus toxin T-cell epitope for genetic immunisation of the animals. Down-regulation of GDF-8 in catile, pigs and poultry used for meat production, reducing the need for antibiotic feed-additives. Anti-GDF8 vaccines can be used to treat human diseases such as cancer cachexia where muscle atrophy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

Also described is a method of modulating an effect of myostatin on a cell by contacting the cell with an agent that affects myostatin signal transduction in the cell. The method and the receptor are useful for ameliorating the severity of a pathological condition characterised by an abnormal amount, development or metabolic activity of muscle or adipose tissue in a subject, particularly a wasting disorder (e.g. cachexia, anorexia, muscular dystrophy or neuromuscular disease) or a metabolic disorder (e.g. obesity or type II diabetes). The present sequence represents the amino acid sequence of chicken
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New growth differentiation factor (GDF) receptors and modulators, useful for ameliorating wasting disorders such as cachexia, muscu dystrophy or neuromuscular disease or a metabolic disorder such a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAW69891
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GGP-8 expression is disrupted or interfered with. Also claimed care: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb from these animals; (2) method for increasing muscle mass in animals by administering an antibody (Ab) that binds to GDF-8; (3) cinhibiting the action of GDF-8 by treating foteal or adult muscle or progenitor cells with a GDF-8 inhibitor; (4) isolated nucleic acid encoding a GDF-8 protein truncated by loss of the C-terminal active fragment. The transgenic animals have increased muscle mass and for poultry reduced cholesterol contents. Method (3) is used to treat muscle wasting or neuromuscular diseases, muscular atrophy and aging, particularly muscular dystrophy, spinal cord or traumatic injuries, congestive or obstructive lung disease, ADDS and againg, method (4) is used to treat cancer of muscle, connective tissue and bone, or obesity. Also (not claimed) GDF-8 can be used to maintain myoblasts intended for transplanting or to improve efficiency of fusion. Ab can be used to detect and capantify GDF-8 (particularly in muscle, for diagnosis or monitoring), also for immunotherapy and in vivo imaging.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The sequence was deduced from a cDNA clone (see AAV45819) isolated from a skelettal muscle cDNA library. The invention provides novel mammalian and avian GDF-8 proteins (see AAW69883-92). A transgenic non-human animal is claimed in which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              neuromuscular disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              also use of GDF-8 inhibitors for treating cancer, obesity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is the amino acid sequence of chicken growth differentiation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                327

                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                CC factor-8 (GDF-8), a novel member of the transforming growth differentiation CC factor-8 (GDF-8), a novel member of the transforming growth factor-CC beta superfamily that appears to relate to various cell contends of the transforming growth factor-CC superfamily that appears to relate to various cell contends of the transforming provides normal additional contends of the sequence was deduced from a cDNA clone (see AAV4592) isolated from a skeletal muscle CDNA library. The CC invention provides novel mammalian and avian GDF-8 proteins (see CC AAW6983)-92). A transgenic non-human animal is claimed in which CC gdF-8 expression is disrupted or interfered with. Also claimed CC are: (1) chicken or turkey eggs or meat, beef, milk, pork and lamb CC from these animals; (2) method for increasing muscle mass in CC animals by administering an antibody (Ab) that binds to GDF-8; (3) city of GDF-8 by treating foetal or adult muscle cc acid encoding a GDF-9 protein truncated by loss of the C-terminal CC acid encoding a GDF-9 protein truncated by loss of the C-terminal CC acid encoding a GDF-9 protein truncated by loss of the C-terminal CC acid encoding a GDF-9 protein truncated by loss of the C-terminal CC acid encoding a GDF-9 protein truncated by loss of the C-terminal CC acid encoding a GDF-9 protein truncated by loss of the C-terminal CC and for poultry reduced cholesterol contents. Method (3) is used to treat muscle wasting or neuromuscular diseases, muscular atrophy CC and aging, particularly muscular diseases, muscular atrophy CC and aging, particularly muscular diseases, muscular atrophy CC and experional bone, or obstructive lung disease, AIDS and cachexia. Method (4) is used to treat cancer of muscle, can be used to maintain myoblasts intended for transplanting or to improve efficiency of fusion. Ab can be used to detect and CC annotify GDF-8 (particularly in muscle, for diagnosis or monitoring), CC also for immunotherapy and in vivo imaging.
                                                                                                                                                                                                   Matches 109;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 32. Application US/09252149B

Sequence 32. Application US/09252149B

Patent No. 6369201

GENERAL INFORMATION:

APPLICANT: Morsey, Mohamad

TITLE OF INVENTION: VERTEBRATE SUBJECTS

FILE REFERENCE: 9001-0042

CURRENT APPLICATION UNMBER: US/09/252,149B

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: 60/075,213

PRIOR APPLICATION NUMBER: 60/075,213

PRIOR REPLING DATE: 1998-02-19

NUMBER OF SEQ ID NOS: 39

SEQ ID NO 32

TYDE: DETERMENT DATE: 1998-02-19

LENGTH; 375
                                                                                                                                                                                  GRNERAL INFORMATION:
